

LIFT WITH EASE

Efficient and ergonomic
material handling

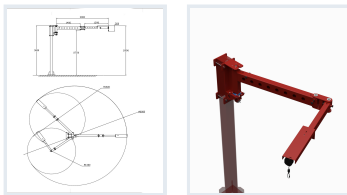

Item No.: 95-10276

MaxiCrane Mini - (3) m - [100] kg

Length (m)	3
Maximum capacity (kg)	100
Weight (kg)	70
Bal-Trol assembly	During
Type of crane	Articulated jib cranes

The MaxiCrane Mini has the same lifting capacity of a MaxiCrane, which is 100 kg, but a shorter arm (3 m). It is most suitable for working areas that have low ceilings and where a normal size crane will not fit.

Silent and swift lifting arm

Its low weight combined with the low-friction bearings in the joints make the MaxiCrane Mini a very quiet and easy-to-work with machine. As with all Lifts All cranes, the MaxiCrane Mini's nifty size and weight means that it can be installed very quickly – saving both time and money – and can be easily installed at any height, securely attached to a steel pillar.

Low-built jib crane can be complemented with a gripper

The clever design of the crane's outer arm, with a built-in Bal-Trol, makes this crane a low-built jib crane. It is very practical for the tightest of work places and offers the operator maximum lifting height. Thinking about adding a hook to the crane to lift containers or tins, or adding a vacuum gripper for carton boxes, or a mechanical gripper to lift and turn rolls? Our grippers are tailor-made to optimise your material handling. The couplings of our grippers are usually the same so switching from one gripper takes no time at all and can easily be done by the operator. It's that simple!
