Type of lifting object	Electronics, Metal
Weight (kg)	18.2
Maximum capacity (kg)	18
Serial number	A6957
Function	Rotation
Gripping technique	Mechanical
Optional control	PSH

An electrical enclosure, or electrical box, is the name for boxes or cabinets that encapsules electronics or wiring. These boxes are often made of metal and can come in different shapes depending on the components they are to contain. An electrical enclosure can be both large and heavy, or small and light. Lifts All's enclosure gripper is made for lifting enclosures up to 18 kilos, but we can also customize it to lift enclosures of other weights.

Gripper for electrical enclosures- Easy to use

The lifting tool for enclosures has several features. It has a rubber-lined gripping surfaces (clamps) that grip the surface of the enclosure firmly, without damaging it. The enclosure is clasped tightly during the entire lift without risk of it falling to the ground. You can also rotate the load 355 degrees, while in the state of weightlessness, allowing you to position the load with your hands. Lifting enclosures in to a rimmed pallet or onto a table is effortless.

Do you have electrical enclosures of different sizes that you need to lift? The adjustable arms ensure that you can do this easily. This lifting tool has the capacity to lift enclosures between 630-780 mm wide. The gripping width of your lifting tool can also be customized to the enclosures that you need to lift.

The lifting tool is easy and comfortable to use. The control unit consists of only four buttons, to grip, lift, lower and release. It also has an extra handle, so that you always have your arms placed in an ergonomic position.
