

LIFT WITH EASE

Efficient and ergonomic
material handling

Item no.: 89-12421 (alt. 89-12176)

Pallet turner 89-12421

Type of lifting object	Pallet
Weight (kg)	50
Maximum capacity (kg)	45
Serial number	A7356 (alternatively A6842)
Function	Rotation
Gripping technique	Mechanical
Optional control	PSH
Industry	Distribution centers and warehouses

This is the pallet turner - a mechanical lifting tool for moving and/or turning pallets. Lifting pallets manually can lead to both wear and tear on your body, and to accidents. The pallet turner allows the operator to work quickly and ergonomically, and it is the perfect tool for those working in warehouses, industry, and distribution. With the same tool you lift different sizes of pallet. The operator adjust the tool depending on the weight of the load. Maximum lifting capacity for this lifting solution is 45 kg/99 lb but the gripper itself whey 50 kg/110 lb.

Pallet turner – how does it work?

Gripping takes place on the long side of the pallet. The lifting tool grips with the two gripping plates, clamping onto the pallet, and then holds the load firmly and securely for the entire lift. While lifting, you can also turn the pallet upside down with a simple push of a button. By stacking the pallets on top of each other alternately, deck-side up on deck-side down, you save space as well. After moving the pallet to the desired place, press one of the buttons on the lifting tool. The gripping plates will release the pallet, and the lifting tool can be removed from it.

Vacuum Suction Plate

Our most common pallet grippers are for EU pallets, full pallets and half pallets. However, we can modify the lifting tool so that it can lift other sizes of pallets as well. We always specially adapt our lifting tools precisely, to lift exactly what our customer needs to lift. Our lifting tools are customizable and you can choose the maximum lifting capacity needed, a tilt function, a rotation function, etc., to suit your needs. Read more about our different pallet lifts [here](#).
